

PostMaster Enterprise Mail MIS / PME-Web MIS.

PME-Mail-MIS (PME-EMIS) & PME-Web-MIS (PME-WMIS) are monitoring modules designed to control email use and internet in the corporate network. PME-EMIS analyzes email log files and provides detailed reports about private and business emails coming to and from the corporate network. Similarly, PME-WMIS analyzes web log files and provides detailed reports about URLs accessed / files downloaded by the users within the network. The reports have a well-defined layout and deliver information in a crisp and clear manner.

PME-EMIS module is a solid solution against frivolous employees who undermine corporate discipline and decrease productivity by sending and receiving non-work related emails. It can also help reduce the damage from the bandwidth misuse which costs companies in financial terms.

PME-WMIS module is an equally solid solution against employees who misuse corporate internet connectivity and decrease productivity. It also helps reduce the damage from the bandwidth misuse which costs companies in financial terms.

Based on the above reports corporate email / internet usage policy can be enforced; blocking the unwanted mails can be done; non-productive URLs can be blocked; and the bandwidth can be saved.

Working and Mechanism

PME-EMIS module monitors the logs of outgoing, incoming and internal mails and stores the relevant data in the database for statistical query. Similarly, PME-WMIS module monitors the logs of all the protocols and stores the relevant data in the database for statistical query. Both PME-EMIS & PME-WMIS parses the relevant log files generated and updates their respective database at [a] change of the day [b] the first startup of the day. This ensures that there will be little impact on the main mailing system which is critical. A separate license is required for enabling PME-EMIS & PME-WMIS. The number of user licenses must be same as that for PME-Mail / PME-Web.

Reporting Options
