## Release Notes

PostMaster Enterprise ver. 8.04

---

2013-14

## New Features

### PME Core - Sync Server

PME v. 8.04 comes with a built-in Sync Server, enabling users to sync their personal contacts and calendar data between PME, their email client and their mobile devices. The integrated Sync Server gives users complete freedom to access all required information while on the move, without any manual intervention from the administrator. This integration also makes database recovery easier, faster and reliable in the event of a mishap.

### PME Core - Chat Server

PME v. 8.04 supports integration with the Jabber Chat Server. Users can incorporate any Jabber client to communicate with each other. The integration comes with an administrator controlled web interface to start/stop and/or change the Chat Server port, ensuring uncompromised productivity.

## Feature Enhancements

### Enhanced Criteria-based Email Search

An enhanced Search functionality is implemented in the IMAP server to enable users to search mails based on various criteria such as email Subject, Cc, Seen, Unseen, Sent Date, so on and so forth. This will help users to search through heavy volumes of email and narrow down on a particular mail based on the desired criteria.

### Auto Fill for Local Email

PME v. 8.04 enables administrators to select local email addresses under the 'Allow Sender List in Alias' easily. This enables users to automatically populate the email ids based on their aliases.

**Location:** WebAdmin > PostMaster > User > Alias

### Multiple Attachment Selection

PME v. 8.04 allows users to attach multiple files in one go – improving response and turnaround time.

**Location:** WebMail > Compose > New Mail > Attachments

### Single Window Login

PME v. 8.04 allows users to seamlessly login within the same window on entering their login credentials.

**Note:** To use this feature, users need to enable the 'login\_samewindow' flag in 'pmswitches.prp' file. The flag is disabled by default.

**Location:** pmev8 > conf > pmswitches.prp > login\_samewindow

## Default Email id Setting for Users Mapped to Multiple Domains

For users mapped to multiple domains, administrators can display the default email id while composing an email or accessing the address book. With this enhancement, users need not worry about which email id they are using while composing/sending a particular email.

**Note:** To use this feature, the administrator needs to enable the 'adbk\_show\_def\_email\_only' flag found in 'pmswitches.prp' file. The flag is disabled by default.

**Location:** pmev8 > conf > pmswitches.prp > adbk\_show\_def\_email\_only

## Issue Fixes

### PME-Archive

An issue relating to blank date-wise folders getting created if the 'User Defined Archive Path' contained the string '20XX' (where XX would be the two-digit date year) has been fixed.

### PME-Mail

- An issue relating to mails getting stuck in active spool and the 'Max connections reached' error getting displayed due to SMTP Connections not getting freed has been fixed.
- The body of certain emails wasn't displayed properly on iPhones when mails were fetched using IMAP. This has been fixed.
- When users mapped to groups exceeded their per-day or per-min mail limit, the group level mail sending got disabled instead of the individual user level. This issue has been resolved by providing a user level 'Send Mail' checkbox which will get automatically disabled when users exceed their defined limit.

### PME-Web Mail

- An issue relating to the 'Reply' or 'Forward' icon not getting displayed for auto saved mails or mails saved to the 'Drafts' folder has been resolved.
- An issue relating to the real name and email address mismatch while printing a mail has been resolved.
- An issue relating to wrong home page being displayed to the users whose Web Mail was disabled has been resolved. Such users will now be redirected to the appropriate home page.

### PME-Email MIS

- When users tried to view the 'External Recipient Report' an error message saying 'Data doesn't exist for a month' was displayed. This issue has been fixed.
- An issue relating to memory leak due to DB Objects not getting properly closed has been fixed.

## Others

- An issue relating to PME getting hung due to high memory utilization, resulting from intermittent excessive email usage, has been resolved.
