## **Release Notes**

PostMaster Enterprise ver. 8.06

---

2014-15

## New Features

### PME Mail – Auto delete confirmed SPAM

PME v. 8.06 automatically deletes mail detected as confirmed SPAM. Earlier such mail was placed in the deferred pool. The AutoDelete functionality is 'Disabled' by default. While enabling this feature, the Admin needs to specify the Response Code and action as applicable, so that users are aware of the reason(s) why such mail was deleted.

**Location:** PME Mail > Outgoing > Rules > Outgoing Mail > Advance Settings

### PME Web – Domain-wise local account view

PME v. 8.06 allows the Admin to search Local Users and Gateway Users by Domain Name. Additionally the admin can also see which user is mapped to which domain.

**Location:** PME > Admin UI > PostMaster > Manage Accounts > Users > User Manager

### PME Web – Ability to check rights of multiple users at once

The new PME v. 8.06 allows the Admin to view rights of all users in one go. Earlier the Admin was only able to check the rights of a single user at a time.

**Location:** PME > Admin UI > PostMaster > Manage Accounts > Users > User Manager

### PME AntiVirus - AntiVirus MIS Report

With the new PME v. 8.06, the Admin can now check date wise MIS report of mails which are scanned by PME's AntiVirus module. This will assist the Admin in determining virus detection patterns and take necessary pre-emptive measures to avoid future mishaps.

**Location:** PME > WebAdmin > PME Mail > AntiVirus > Logs > MIS

### PME Core – Ability to remove unused QSM folder

PME v. 8.06 allows removal and backup of unused QSM folder on a different path. This will free up the space in the drive where PME is installed – causing PME to function faster.

**Note:** This feature is an external utility for PME installed on Linux platform.

## Feature Enhancements

### Email account mapping with multiple domains

This feature enhancement enables the Admin to map an email account to multiple domains through the Basic account addition page. Earlier this was possible only through the Mapping page.

### Copy/move mails to/from Public folder via IMAP

PME v. 8.06 enables users to copy/move mails to/from Public folder to System/Personal folder using IMAP commands.

### Ability to access AddressBook via LDAP

This feature enhancement allows users to fetch PME contact details in AddressBook using LDAP. All contact details are fetched using Thunderbird email client. However, with PME LDAP server, MS Outlook currently displays the following fields only:

First Name, Display, Alias (employee Id), Title (Designation), Company, Department, Business and Phone No.

### Ability to print AddressBook details

This feature enhancement enables the Admin and PME users to print the required personal details of email-ids present in their Personal, Local and Global AddressBook.

**Location:** WebMail > AddressBook

### Account type displayed in user details

PME v. 8.06 allows the Admin to check the users' account type – Gateway/Regular – once they export user details.

**Location:** WebMail > AddressBook

### Ability to export Alias account details in Excel

With this feature enhancement, the Admin can export Alias details (Alias Name, Description, Email Address, Forwarding List, Allow Senders Type, and Sender List) to an Excel sheet for further processing.

## Hide Forwarding Details

With this feature enhancement, In-Forwarding and Out-Forwarding details can be hidden based on flag 'hide\_crossref\_details'. Earlier, all In-Forwarding and Out-Forwarding details were displayed by default which delayed the loading of the display page. Hence the 'hide\_crossref\_details' flag was added to 'pmswitches.prp', which when set to 'true', hides all in/out forwarding details – resulting in the display page loading instantly.

### Location:

WebAdmin > PostMaster > Manage Accounts > Cross Ref > Email In Forward

WebAdmin > PostMaster > Manage Accounts > Cross Ref > Email Out Forward

## Responsive WebMail

PME v. 8.06 comes with an entirely revamped User Interface that is highly responsive. The revamp is a 2 phase process. Phase1 focuses on WebMail features except AntiSpam, AddressBook, Spool and Public Folders functionality – these will be part of the Phase 2 revamp. The responsive UI is best viewed on Mozilla Firefox, Google Chrome, Internet Explorer 10 and above browsers.

## Issue Fixes

### PME WebMail

- The mail body was sometimes not displayed on email client on MAC machines. This issue has been resolved by revising the concerned code.
- The 'Move' option has been added to WebMail to enable users to move mails to desired folders for better mail management.
- An issue relating to meeting request reminder (via email) not functioning properly has been resolved.

### PME-Mail

- An issue relating to validation of email ids with incorrect syntax has been resolved.
- PME always showed 'Authentication Failure' for all erroneous scenarios of Outgoing SMTP server. This issue has been resolved.
- An issue relating to attachments not being displayed when mail was sent in Rich Text Format through MS-Outlook has been resolved.
- Mails sent by email ids containing special characters such as '=', '/', and ',' were getting bounced as 'Invalid Sender Email Address'. This has been resolved.

## PME WebAdmin

- Earlier, while attempting to send multiple attachments, if users exceeded their allotted mail size quota, they received an incorrect bounce alert saying 'Workflow License Does Not Exist'. To resolve this the Admin needs to reconfigure the Alert type through configuration settings from UI via the Admin console:

Go to PostMaster > Core Settings > Alerts > Mail > Select the Alert Type as Upload Mail Restriction from the drop-box menu.

In Mail Body, enter the appropriate alert message related to quota exceed alert for oversize mails. On submission of this information, the respective alert shall be displayed for oversize mails.

- An issue relating to the Password Policy not functioning as desired after failure of login attempts has been resolved.

## PME-WebCal

- An issue relating to meeting request reminder (via email) not functioning properly has been resolved.

## PME MailingList

- While conducting email campaigns, sometimes double images were displayed on Outlook Express. The issue has been resolved by fixing the concerned code.

## PME Core

- When authentication mode in PME was set to 'ADS', the Admin was unable to reset password for users with authentication mode 'Self'. Such users were also unable to reset their own password through PME Webmail. This issue has been resolved.
